

Northern Embankment Improvement Works

Tree Planting Works: Existing trees on the northern embankment slope will be removed and relocated within the new planting areas where practical to enable the earthworks to be carried out. We will plant trees within an area double to that impacted upon by our works. The 'Proposed' photo below is a Post-Construction and 15 years post-construction conceptual visualisation of the tree planting work, realigned Carl Beck, North Spillway to aid understanding and to seek views of stakeholders.
